📄 Freelancing Assignment Template

Name: Fares Ibrahim
Date: November 1st 2026

🔹 Step 1: Your Skill

Write ONE specific skill you want to offer as a freelancer.

✏️ Answer:
..Building responsive websites and REST APIs using ASP.NET Core and C# for backend, and Html, CSS, and JavaScript for frontend.....

🔹 Step 2: Your Service

Describe your service in 1–2 sentences.

✏️ Answer:
I build customized REST APIs according to customer needs.

Develop modern and responsive websites to help them build strong online presence

---

🔹 Step 3: Target Client

Who are your potential clients? Be specific.

✏️ Answer:
.....Small local businesses.....
.....Online businesses.....

🔹 Step 4: Service Description

Write 3–5 sentences explaining your service:

✏ Answer:
I offer website development service. Starting from a simple Figma design sketch to a real modern responsive website. My services use the best technologies that ensure a working website across all devices. My goal is to help business owners to be professionally present online and attract more customers
.....

🔷 **Step 5: Pricing** 💰

Plan 1: Single Page App
Price: ___80$_____
Includes:

- ....One page or feature, such as a landing page, a CRUD screen, or one API endpoint.....
- .....

Plan 2: Full Web App
Price: ___250$_____
Includes:

- .....Multi-page app with database, auth, backend API and source code.....

Plan 3: Full Stack Platform

Price: ____600$_____

Includes:

- .....Backend API, database, admin panel, full web app, and deployment guidance……

Reason for pricing:
..... My packages are priced by scope, so you know exactly what you're getting: $80 for a single page or feature, $250 for a full web app with database and login, and $600 for a complete platform with an admin panel and optional mobile app. I'm building my reputation, so I keep my rates accessible without cutting corners on code quality, and every package includes clear delivery times and revisions. If your project falls between tiers, message me and I'll quote it for

your exact needs.....
.....

◈ Step 6: Client Scenario 💬

Scenario:
“I need a simple website for my business. Can you help?”

🖉 Answer:
...Yes, I sure can! How can my services help you? I have 3 service plans. A basic single page app that briefly displays the kind of business you have, a full web app that allows the customer to view all aspects of your business, and lastly a full stack platform that includes a full website and admin panel to control the content on your website behind the scenes. I’m ready and happy to help you in presenting yourself professionally
online.....
.....
.....

◈ Step 7: Project Idea 🛠

🖉 Answer:
.....I can build you a responsive website that has a modernUser Interface design and ensures a great User Experience.....
.....

◈ Step 8: Weekly Plan 🗓

Day	Task
Day 1	... Write down the 5-page scope and design the database.....
Day 2	.. Build the backend API
Day 3	... Add login and roles
Day 4	Build Pages to 1 to 3
Day 5	Build pages 4 and 5, then apply the client’s branding
Day 6	Test everything and send the preview to the client
Day 7	Apply the revisions and deliver the source code with a readme
